AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (previously presented): A rubberized fiber material used in a belt reinforcing layer of a pneumatic tire, characterized in that the rubberized fiber material comprises polyketone fibers having substantially a repeat unit represented by the following formula (I):

$$-\left(\begin{array}{c} C - A - \\ 0 \end{array}\right) \qquad \cdots \qquad (I)$$

(wherein A is a moiety derived from an ethylenically unsaturated compound polymerized through ethylenic linkage, and may be same or different in repeat units) and a coating rubber covering the fibers, and the coating rubber has a modulus at 100% elongation (room temperature) of not less than 2.5 MPa but not more than 5.5 MPa and a rebound resilience at 23°C of not less than 60%.

2. (currently amended): A rubberized fiber material used in a carcass ply of a pneumatic tire, characterized in that the rubberized fiber material comprises polyketone fibers having substantially a repeat unit represented by the <u>following</u> formula (I):

$$-\left(\begin{array}{c} C \\ O \end{array}\right) \qquad --- \qquad (1)$$

AMENDMENT UNDER 37 C.F.R. § 1.114

Application No.: 10/550,553

Attorney Docket No.: Q90237

(wherein A is a moiety derived from an ethylenically unsaturated compound polymerized through ethylenic linkage, and may be same or different in repeat units) and a coating rubber covering the fibers, and the coating rubber has a rubber component consisting of natural rubber and has a modulus at 100% elongation (room temperature) of not less than 2.5 MPa but not more than 5.5 MPa.

- 3. (previously presented): A rubberized fiber material according to claim 2, wherein the coating rubber has a rebound resilience at 23°C of not less than 60%.
- 4. (original): A rubberized fiber material according to any one of claims 1 to 3, wherein A in the formula (I) is an ethylene group.
- 5. (currently amended): A pneumatic tire comprising a belt reinforcing layer, characterized in that the belt reinforcing layer comprises polyketone fibers having substantially a repeat unit represented by the <u>following</u> formula (I):

$$\begin{array}{c|c} \hline & C & A & \hline \\ & O & & \\ & &$$

(wherein A is a moiety derived from an ethylenically unsaturated compound polymerized through ethylenic linkage, and may be same or different in repeat units) and a coating rubber covering the fibers, and the coating rubber has a modulus at 100% elongation (room temperature) of not less than 2.5 MPa but not more than 5.5 MPa and rebound resilience at 23°C of not less than 60%.

AMENDMENT UNDER 37 C.F.R. § 1.114

Application No.: 10/550,553

6. (currently amended): A pneumatic tire comprising a carcass ply, characterized in that the carcass ply comprises polyketone fibers having substantially a repeat unit represented by the following formula (I):

Attorney Docket No.: Q90237

$$\begin{array}{c|c} \hline \\ \hline \\ C \\ O \\ \end{array} \qquad \begin{array}{c} \hline \\ \hline \\ \end{array} \qquad \begin{array}{c} \hline \\ \end{array} \qquad \begin{array}{c} \hline \\ \hline \\ \end{array} \qquad \begin{array}{c} \hline \\ \end{array} \end{array} \qquad \begin{array}{c} \hline \end{array} \qquad \begin{array}{c} \hline \\ \end{array} \end{array} \qquad \begin{array}{c} \hline \\ \end{array} \qquad \begin{array}{c} \hline \\ \end{array} \end{array} \qquad \begin{array}{c} \hline \\ \end{array} \end{array} \qquad \begin{array}{c} \hline \end{array} \qquad \begin{array}{c} \hline \\ \end{array} \end{array} \qquad \begin{array}{c} \hline \end{array} \qquad \begin{array}{c} \hline \\ \end{array} \end{array} \begin{array}{c} \hline \end{array} \qquad \begin{array}{c} \hline \\ \end{array} \end{array} \qquad \begin{array}{c} \hline \\ \end{array} \end{array} \begin{array}{c} \\ \end{array} \end{array} \begin{array}{c} \hline \end{array} \end{array} \begin{array}{c} \\ \end{array} \end{array}$$

(wherein A is a moiety derived from an ethylenically unsaturated compound polymerized through ethylenic linkage, and may be same or different in repeat units) and a coating rubber covering the fibers, and the coating rubber has a modulus at 100% elongation (room temperature) of not less than 2.5 MPa but not more than 5.5 MPa.

- 7. (original): A pneumatic tire according to claim 5 or 6, wherein the pneumatic tire is a tire for a passenger car.
- 8. (new): A rubberized fiber material according to claim 1, wherein the coating rubber has a rubber component consisting of natural rubber.
